Solution provider – Medical

Our products

Focusing our efforts on improving safety, we develop tailor-made solutions with a view to enhance people's well-being and comfort.

Each day, around the world, our medical applications help cure patients' wounds, facilitate the healing process of injuries and protect people against infections. Our spunlaced nonwovens are used in operating theatres, hospitals and nursing homes to ease recovery and help save from harm.

Be it in wound care, medical hygiene or incontinence treatment, it is our aim to transform your need into the right product concept and offer a durable solution that supports a safer life.

With a focus on performance and efficiency, we help supply highly-engineered and competitive medical solutions to hospitals and nursing homes around the world.

Our vast investments in R&D, our network as well as our proprietary knowledge enable us to be one step ahead and offer innovative, customized product solutions to our clients in the medical market. We not only do research in-house, but also attach great importance to a strong collaboration with international universities, research institutes and our business partners along the entire supply chain from the fiber to the end product. In cooperation with our sister company Tytex, we have the chance to combine its knitting technology with our high-quality nonwovens and offer all encompassing product concepts to the market. Thanks to our international organizations we are in close proximity to our customers and are able to keep the chain of distribution short.

It is our aim to help our customers differentiate in their market segments and to transform your need into the right product concept.

We manufacture a wide range of medical solution concepts that are used in operating theatres to aid prevent bacterial contamination, in hospitals to help cure patients and in nursing homes to assist elderly people.

We supply medical product solutions that are designed to help enhance people's well-being. Our products are characterized by improved absorbent properties thanks to the special fibers and technology applied, superior homogeneity and a gentle touch which increases the friendliness to the skin.

Thanks to our intense cooperation with our sister company Tytex, we have the chance to offer a unique product combination encompassing textiles and nonwovens. Multiple functions in just one layer add value to the final product and enable us to offer cost-efficient solutions.

Due to the knitting technology of Tytex and the high-quality spunlaced roll goods of Norafin, we offer innovative, tailor-made product solutions to the market. In close cooperation with our customers, this leads to cost-optimized solution concepts that meet your product requirements.

Product Characteristics

- wearing comfort
- durability
- breathability
- barrier resistance
- 3D structures using Norafin's spunlaced 3D Performance fabric
- multiple fiber blends including natural fibers such as cotton
- various colours and fabric weights available

Spunlace:

Basis weight range: 30 – 750 g/m²

Line widths: 2.15 – 4.50 meters
